

Dear all

In this week's digest:

- The **MODSIM2023 detailed program** is now available. You can download it from <https://mssanz.org.au/modsim2023/program.html>  
Please note further minor changes may be published. It is currently offered as a PDF, but will be available in interactive form through the conference app along with a website version. These will be released during the week leading up to the conference. The app will allow you to search and then create and save your own personal schedule, along with plenty of other useful features. Links to download abstracts and papers will be included.
- All MODSIM proceedings now have an ISSN – it is 2981-8001. Some people may find this useful for reporting when citing conference papers.
- To anyone who is an editor for a journal – we will have a display table set up at MODSIM2023 where you may like to promote your journal. Please contact Sue Cuddy if interested – [susan.cuddy@csiro.au](mailto:susan.cuddy@csiro.au)
- NSW Primary Department of Primary Industries has a job opening for a Plant Biosecurity Epidemiologist – see <https://iworkfor.nsw.gov.au/job/plant-biosecurity-epidemiologist-408812>

If you would like something included in this digest, please email it to [office@mssanz.org.au](mailto:office@mssanz.org.au)

Kind regards, Karen
